STEEL SQUARE NUTS TR10/60 in 11SMnPb37 W.NR:1.0737 - R 500 N/mm², (HB 120/200)

Material characteristics: The steel square nuts are made by us from drawn bars h11 in certified R50 steel.

A much cheaper item than the similar brass square nut but with a more specific use. Usable for manual positioning movements but requiring good lubrication as the steel does not have the anti-friction properties. The lubrication is a determining factor in achieving the best efficiency of this flange nut and hence we recommend viewing the lubricants in our *Technical Catalogue GDM* (www.bimeccanica.it).

As per the similar square nuts in brass and nylon they can also be fixed by bolts by means of personalised holes (see preceding pages) and also, **as illustrated in the images below the CQA can also be welded in vertical position on the side of a base, for the positioning of medium/light loads and for heavy loads by the addition of a Safety Support.** The Safety Support is not necessary whenever the welding comes with the load supported above the nut instead of on the vertical side (see examples below and on the following pages).

• CQA Steel square nut - Examples of fitting in respect of the type of load to support:

CQA nut welded with Safety Support TDS to the bearing structure for heavy loads

MEDIUM/LIGHT LOADS

With CQA/L TR10/60 nut cantilever welded on four sides (without support), application allowed in cases in which there are no risks of injury should the welding around the nut break:

HEAVY LOADS

With CQA/L TR10/60 nut welded under the base with screw passing through:

HEAVY LOADS

With CQA/L TR20/60 nut cantilever welded and reinforced with "TDS" Safety Support (see following pages)

"TDS" added for cantilever welding in safety.

art.CQA/L TR10/60 base product with lubricator M6

CQA nut welded to the bearing structure for medium/light loads

For more of these applications see the following pages whilst for Safety Supports or the Stabilisers see Technical Catalogue SLV (www.bimeccanica.it).

● **WARNING: WITHOUT SPECIFYING "R" or "L" AT THE END OF THE CODE AND "Dx" or "Sx" AT THE END OF THE ARTICLE THE NUT IS ALWAYS CONSIDERED TO BE RIGHT THREAD.**

* The items marked with an asterisk are less used, we suggest contacting our offices to check availability.

- > **ON REQUEST:** Steel square nuts **TR46x8**, with dimensions of TR45x8.
- > **ON REQUEST:** for sufficient quantities we can supply steel square nuts **TR70x10** and **TR80x10**.
- > **ON REQUEST:** Steel square nuts with **pitch**, and **external dimensions** different to those listed above.
- > **ON REQUEST:** Steel square nuts with **transversal or longitudinal fitting holes**.
